	)	

The court has before it Qwest Corporation's Opening Brief (doc. 20), Mountain Telecommunications Inc.'s (MTI) Opening Brief (doc. 21), Defendants' Response (doc. 22), and Qwest's Reply (doc. 23). We heard oral argument on Friday, December 3, 2004.

I. Procedural History

This is an appeal under 47 U.S.C. § 252(e)(6) challenging the Arizona Corporation Commission's (ACC) Decision No. 66385 (Phase II and IIA Supplemental Opinion and Order) issued on October 6, 2003,

1 pursuant to the compulsory arbitration provision of the  
2 Telecommunications Act of 1996. This court applies a *de novo*  
3 standard in considering the ACC's compliance with federal law. See  
4 U.S. West Communications v. MFS Intelenet, Inc., 193 F.3d 1112,  
5 1117 (9th Cir. 1999). Any factual findings are reviewed for  
6 "substantial evidence." MCI Telecommunications Corp. v. U.S. West  
7 Communications, 204 F.3d 1262, 1266 (9th Cir. 2000). Our role is  
8 "to determine whether the agreement...meets the requirements of"  
9 sections 251 and 252. 47 U.S.C. § 252(e)(6).

10 Qwest, an incumbent local exchange carrier (ILEC), is required  
11 under the Telecommunications Act of 1996, 47 U.S.C. § 251 *et seq.*,  
12 to lease parts of its Arizona telecommunications network, known as  
13 unbundled network elements (UNEs), to competitors, called  
14 competitive local exchange carriers (CLECs). The UNEs can either  
15 be "entrance" facilities or "direct trunk transport" facilities.  
16 Entrance facilities are transmission facilities connecting ILEC  
17 wire centers to a CLEC's network. The transport facilities  
18 transmit calls between ILEC switches or wire centers. The rates  
19 for these UNEs set by the ACC and charged by Qwest are at issue  
20 here.

21 The rates for UNEs charged by Qwest were first set as a result  
22 of a 1998 arbitration by the Arizona Corporation Commission  
23 pursuant to § 252(b) of the Act. Decision No. 60635. MTI was not  
24 a party to that decision and did not request arbitration. Id. at  
25 3. In December 2000, a Procedural Order was issued by the ACC  
26 which stated that Qwest's existing UNE rates would be reviewed in  
27 *Phase II* proceedings. *Phase II Opinion and Order* at 4. In the  
28

1 ensuing *Phase II* proceedings, Qwest advocated the adoption of  
2 separate rates for entrance and transport facilities. However, in  
3 its *Phase II Order*, the ACC adopted the "HAI model" which combined  
4 the rates for both facilities. *Phase II Order* at 10-11. The ACC  
5 understood this distinction. It noted: "Qwest's models are  
6 designed to calculate the investment required to provide a specific  
7 element or service," *Phase II Opinion and Order* at 9, while the  
8 HAI model focused on "universal service." *Id.*

9 The parties agree that in June of 2002, Qwest filed with the  
10 ACC, and served on all parties to the *Phase II* proceedings, a  
11 "compliance filing." Qwest Brief at 10; ACC Answer at ¶ 31. The  
12 combined transport rate set in the *Phase II Order* became effective  
13 on the date of the *Phase II Order*, June 12, 2002. No party sought  
14 judicial review of the *Phase II Order*.

15 MTI, the intervenor here, did not participate in the ACC  
16 proceedings until it filed a "Motion for Injunction" with the ACC  
17 in January, 2003, seeking to enjoin Qwest from charging the  
18 transport rates established by the *Phase II Order*. *Phase II and IIA*  
19 *Supplemental Opinion and Order*, at 2. MTI claimed the transport  
20 rates charged as a result of the *Phase II Order* resulted in an  
21 unintended five-fold increase in the transport rates previously  
22 charged by Qwest and that MTI was being charged for entrance  
23 facilities that it did not use. *Phase II and IIA Supplemental*  
24 *Opinion and Order* at 2.

25 In its *Phase II and IIA Supplemental Opinion and Order* issued  
26 October 6, 2003, the ACC stated that all parties, including Qwest,  
27 agreed that the *Phase II Order* resulted in an unexpected result and  
28

1 found the *Phase II Order* was based on a "mistaken premise." *Phase*  
2 *II and IIA Supplemental Opinion and Order* at 4. Qwest disputes  
3 that it shared the ACC's mistaken assumption. Qwest Brief at 21.  
4 The ACC went on to find that "[d]ue to this mistaken assumption,  
5 the most equitable interim result for companies such as MTI is to  
6 return transport charges to their pre-Phase II status." *Phase II*  
7 *and IIA Supplemental Opinion and Order* at 4-5. These pre-Phase II  
8 rates, or "1998 rates," were the rates instituted in 1998 in  
9 Decision No. 60635. The ACC determined that the 1998 rates would  
10 be effective retroactive to the date of the *Phase II Order* on June  
11 12, 2002 until permanent rates were adopted in *Phase III*. *Phase II*  
12 *and IIA Supplemental Opinion and Order* at 7. This retroactive  
13 application of the 1998 rates is the crux of the dispute before the  
14 court. Qwest claims that the ACC's *Phase II and IIA Supplemental*  
15 *Opinion and Order* constitutes unlawful retroactive ratemaking.  
16 Moreover, while Qwest does not dispute the power of the ACC to  
17 change rates prospectively, it does challenge the ACC's selection  
18 of the 1998 rates.

19 II. Arbitration under 47 U.S.C. § 252(b)

20 The *Phase II Order* that established the combined entrance and  
21 transport rate was the result of binding arbitration under 47  
22 U.S.C. § 252 (b)(1). The Telecommunications Act instructs ILECs  
23 and CLECs to negotiate in good faith to reach interconnection  
24 agreements. 47 U.S.C. §§ 251(c)(1), 252(a). If ILECs and CLECs are  
25 unable to agree, they may resolve their disputes through the  
26 compulsory arbitration provision of the Act. § 252(b)(1). If the  
27 parties engage in arbitration, the State commission shall  
28

1 "establish any rates for interconnection, services, or network  
2 elements according to subsection (d) of this section." § 252(c)(2).  
3 Subsection (d) requires that the State commission set a "just and  
4 reasonable rate for the interconnection of facilities and  
5 equipment" and that such rate be based on cost, be  
6 nondiscriminatory, and may include a reasonable profit. §  
7 252(d)(1).

8 The United States Court of Appeals for the Ninth Circuit  
9 addressed the effect of arbitration under § 252(b) in Pacific Bell  
10 v. Pac-West Telecomm, Inc., 325 F.3d 1115 (9th Cir. 2003). The  
11 court concluded that "[o]nce the terms are set, either by agreement  
12 or arbitration, and the state commission approves the agreement, it  
13 becomes a binding contract." Id. at 1120. The arbitration is  
14 "binding," id., and the decisions of the ACC, such as the *Phase II*  
15 *Order*, become part of a binding contract. Section 252(a)(1) of the  
16 Act supports this conclusion. It makes clear that an  
17 interconnection agreement constitutes a "binding agreement." See  
18 § 252(a)(1); Pacific Bell, 325 F.3d at 1127. As a result of the  
19 ACC's *Phase II Order*, Qwest was contractually required to charge  
20 the combined transport and entrance rate prescribed by the HAI  
21 model. The *Phase II Order* constitutes a binding contract among  
22 Qwest and the CLECs.

23 MTI and the ACC claim the *Phase II Order* was based on a  
24 "mistaken assumption." *Phase II and IIA Supplemental Opinion and*  
25 *Order* at 13. Qwest contends that it did not, as the ACC asserts,  
26 share in the "mistaken assumption" that no CLECs used the transport  
27 and entrance facilities separately. Qwest's own proposed rate  
28

1 structure advocated separate rates and put the parties on notice  
2 that a dispute existed as to whether a combined or separate UNE  
3 rate should be charged. Nor is there any evidence in the record to  
4 support the ACC's statement in the *Phase II and IIA Supplemental*  
5 *Opinion and Order* that Qwest was unaware that some customers use  
6 entrance and transport facilities independently. Thus, it is  
7 unlikely that Qwest shared in the "mistaken assumption."

8       Although MTI claims it did not know that the combined rate  
9 would result in an unexpectedly high charge until it received  
10 Qwest's invoice in January, 2003, it should have known. It could  
11 have participated in the *Phase II* proceedings in which its  
12 interests were at stake. The established principle of contract law  
13 that a party who enters a contractual relationship without  
14 exercising due diligence cannot complain that the outcome is  
15 unexpected applies here. See 27 WILLISTON ON CONTRACTS § 70:69 (4th  
16 ed. 2004). MTI ignored its own limited knowledge of the facts and  
17 therefore, bore the risk of its "mistaken assumption." Id. Once  
18 the time for direct judicial review had passed, the rates in the  
19 *Phase II Order* became part of the contract among the parties. A  
20 unilateral "error" does not render the contract void ab initio, as  
21 the ACC contends.

### 22                   III. Retroactive Ratemaking

23       Qwest relies on Arizona Grocery v. Atchison, 284 U.S. 370  
24 (1932), for the proposition that the 1998 rates implemented by the  
25 ACC in its *Phase II and IIA Supplemental Opinion and Order* violate  
26 the rule against retroactive ratemaking. The ACC explicitly  
27 adopted the HAI model for UNE rates in its *Phase II Order*.

28

1 Qwest points to this language: "When...the Commission declares  
2 a specific rate to be the reasonable and lawful rate for the  
3 future, it speaks as the Legislature, and its pronouncement has the  
4 force of a statute." Arizona Grocery at 386. The Ninth Circuit  
5 addressed the issue of retroactive changes to interconnection  
6 agreements in Pacific Bell v. Pac-West Telecomm, Inc., 325 F.3d  
7 1114 (9th Cir. 2003). The court held that a state commission that  
8 purports to change the terms of an existing interconnection  
9 agreement "contravenes the [Telecommunications] Act's mandate that  
10 interconnection agreements have the binding force of law." Id. at  
11 1127.

12 MTI and the ACC contend that three exceptions to the general  
13 rule against retroactive rate-setting apply here. First, the  
14 defendants contend that the general rule does not apply to interim  
15 rates. Thus, if the *Phase II* rate had been established as an  
16 interim rate, retroactive application of the 1998 rate would not be  
17 unlawful. Had the ACC instituted the HAI combined transport rate  
18 as an interim rate instead of a permanent rate in the *Phase II*  
19 *Order*, the ACC's actions would not have violated the rule against  
20 retroactive ratemaking. Generally speaking, the general rule  
21 against retroactivity is inapplicable when there is "adequate  
22 notice that resolution of some specific issue may cause a later  
23 adjustment to the rate being collected at the time of service." OXY  
24 USA, Inc. v. FERC, 64 F.3d 679, 699 (D.C. Cir. 1995) quoting  
25 Natural Gas Clearinghouse v. FERC, 965 F.2d 1066, 1075 (D.C. Cir.  
26 1992). However, it is clear here that the *Phase II* rate was not  
27  
28

1 interim but permanent. At oral argument, the ACC acknowledged that  
2 the *Phase II* rates were not expressly interim:

3 Originally the Commission set rates in the Phase I order  
4 that were expressly interim. With regard to the Phase II  
5 order, it did not, as Qwest points out, we did not use  
6 that language, although the Commission did point out that  
7 there was some data that they wanted to consider that was  
8 not available in the record at that time.

Rep.'s Excerpted Tr. 5-6.

9 The language in the *Phase II Order* does not designate the  
10 rates as interim, but instead explicitly "adopt[s] the HAI model's  
11 results for purposes of pricing transport in this proceeding," and  
12 notes that the rates should be "re-examined in Phase III so that a  
13 full record may be developed." *Phase II Order* at 79. Such a  
14 statement does not create an interim rate. If the ACC intended the  
15 *Phase II* rates to be interim, its *Phase II Order* certainly did not  
16 provide notice to any party, including Qwest. The exception, thus,  
17 is inapplicable.

18 Second, the ACC contends that the rule against retroactive  
19 ratemaking does not apply where an agency corrects a mistake that  
20 is error as a matter of law. However, defendants' reliance on this  
21 second exception is misplaced. The exception applies only when on  
22 direct judicial review a court holds that an administrative body  
23 has erred. For example, in Mountain States v. Ariz. Corp. Com'n.,  
24 604 P.2d 1144, 1147 (Ariz. App. 1979), the court noted that while  
25 an "agency may not later on its own initiative or as the result of  
26 a collateral attack make a retroactive determination of a different  
27 rate (from the final rate) and require reparations," if a refund is  
28 precipitated by a reviewing court's decision, it is lawful. This,

1 of course, is not really retroactive rate-making because the rate  
2 set by the commission is not final where judicial review has been  
3 invoked. Here, it is clear from the record that the retroactive  
4 application of the 1998 rates was initiated and implemented by the  
5 ACC itself long after the time for judicial review had passed.  
6 There was no judicial review of the *Phase II Order*. Therefore,  
7 this exception does not apply.

8 Finally, MTI's argument that the ACC is empowered under state  
9 law to retroactively amend its order is refuted by the ACC's  
10 limited role under federal law: "arbitrating, approving, and  
11 enforcing interconnection agreements." Pacific Bell, 325 F. 3d at  
12 1126. We thus conclude that the ACC may not retroactively change  
13 the *Phase II* rates under the Act.

#### 14 IV. Port Rates

15 In a separate proceeding, *Phase IIA*, the ACC addressed  
16 another component of the rate structure known as the "switch  
17 port." In the *Phase IIA Opinion and Order* of December 12, 2002,  
18 Decision No. 65451, the ACC adopted the HAI model for the switch  
19 port rates. The ACC now concedes that this rate was a "mistake,"  
20 Response at 1, but chose not to correct it retroactively.

21 Qwest argues in the alternative that if the retroactive  
22 application of the transport and entrance rates is allowed to  
23 stand, the "port rate" should also be corrected retroactively.  
24 This contention is mooted by our conclusion that the rate  
25 structures arbitrated under § 252(b) are legally binding  
26 contracts, and by our conclusion that the ACC may not  
27 retroactively alter permanent rates.

1                   V. Prospective Application of the 1998 Rates

2           Qwest also asks us to reverse the ACC's order adopting the  
3 1998 rates on a prospective basis until the ACC sets a permanent  
4 rate in the *Phase III* proceedings. Qwest claims that the 1998  
5 rates have never been found to comply with the FCC'S TELRIC  
6 standards and are inconsistent with other rates set by the ACC in  
7 *Phase II*. However, we need not address these arguments because  
8 the ACC's prospective adoption of the 1998 rates is explicitly  
9 interim, not permanent. In its *Phase II and IIA Supplemental*  
10 *Opinion and Order*, the ACC "conclude[d] that [the 1998 rates]  
11 should be adopted as an interim measure pending completion of the  
12 *Phase III* proceeding" and that a "permanent transport rate will  
13 be established in *Phase III* of this docket." *Phase II and IIA*  
14 *Supplemental Opinion and Order* at 5, 13. As we discussed above,  
15 the rule against retroactive ratemaking is not violated when  
16 rates that are expressly interim are retroactively altered.  
17 Therefore, Qwest may challenge the prospective application of the  
18 1998 rates and seek correction in *Phase III* when the ACC sets  
19 permanent transport and entrance rates.

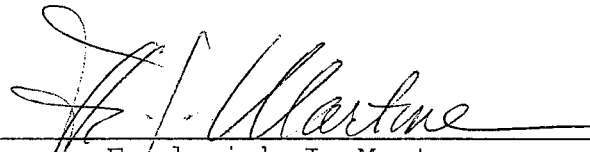

20                   VI. Conclusion

21           In its *Phase II and IIA Supplemental Opinion and Order*, the  
22 ACC concluded that separate transport and entrance rates would be  
23 charged retroactively from June 12, 2002, the date of the *Phase*  
24 *II Order*, because the combined rate was "based on a mistaken  
25 assumption by all parties." ACC Decision No. 66385 at 13. To  
26 the extent that this is a factual finding, there is no  
27 substantial evidence to support it. To the extent the ACC  
28

1 believed it could charge the *Phase II* rates retroactively, it  
2 erred as a matter of law.

3 We vacate the *Phase II* and *IIA Supplemental Opinion* and  
4 Order of the ACC (Decision No. 66385) only in so far as it  
5 purports to apply the 1998 rates to the period between the *Phase*  
6 *II Order* (June 12, 2002) and the *Phase II* and *IIA Supplemental*  
7 *Opinion and Order* (October 6, 2003).

8  
9 DATED this 17<sup>th</sup> day of December, 2004.
